## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, drawn to a method of fault correction, classified in class 326, subclass 10.
- II. Claims 12-23, drawn to a sense circuit, classified in class 327, subclass 525.
- III. Claims 24-26, drawn to a printhead, classified in claims 347, subclass 20.

Inventions I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions I is found to be a **method of fault correction** of an array of fusible links which is independent of invention II which is a **sense circuit that reads fusible links** and does not correct them, furthermore invention III relates to a **printhead that simply comprises a plurality of fusible links** and is not related to a method of correcting nor a sensing circuit the reads fusible links.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

Art Unit: 2819

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
